

BEE STING ALLERGY vs BEESWAX-&-HONEY ALLERGY:

I often get asked: If you are allergic to bee stings, will you be allergic to Beeswax & Honey [Most of my skin creams contain Beeswax & Honey]

“BEE STING allergy” and “BEESWAX/HONEY allergy” are not related to each other, it is 2 different allergies. Rarely one person will have both allergies.

My own explanation:

- ▶ The bee’s stinger is at the end of the abdomen.
- ▶ A bee uses its legs and proboscis (mouth) to suck nectar, to “make” honey. The bee does not use its stinger in making honey.

The easiest way to determine whether you are allergic to beeswax and honey is by asking yourself if you can eat honey. If you are allergic to eating honey, you will be allergic to beeswax as well.

We have 2 Anti-Ageing Creams containing NO beeswax and NO honey:

1. Argan Anti-Ageing Day-Night Cream
2. Vit-E Anti-Ageing Day-Night Cream
