

ADVICE for WOUND CARE & BED SORES:

I can recommend various of my products, and it is important to first do an allergy test before applying within the wound.

How to do Allergy Test:

1. Apply the product on a piece of the skin where there is no wounds or scars.
2. Wait 30 min.
3. If a red rash develops which is inflamed and itchy, you are allergic to the product. Stop using the product all together.
4. If there is no rash, you can continue to use the product in the wound.

Proceed cautiously!

1. Never use any product such as Savlon, Dettol, Surgical Spiritus, Vinyl alcohol on open wounds. Using these products will kill all the new skin cells which form.
2. When cleaning a wound you only have to use a lukewarm salt solution.
3. How you can apply our product (see below for recommendations) onto the outside of the wound. This is to encourage the growth of new skin.
4. Gradually you can proceed to apply to the center of the wound.
5. You can use a paraffin gauze, put onto wound.
6. When using a bandage it is important not to put it on TOO tightly. The wound needs blood supply in order to heal.
7. Change the dressings once a day, or once every second day.

Product recommendations:

1. Bulbinella Cream
2. Beeswax Bulbinella cream
3. DMSO-Bulbinella Cream
4. Cannab!s Herbal Skin Cancer Cream
5. Cannab!s Can-Cure Cream
6. Myrrh Anti-Ageing & Healing Serum.
7. Nella-BEE Cura Cream
8. Canna-BEE Royale Skin Cancer Cream
9. Spekboom Cura Cream
